A MEMBER of HASSLACHER group

#### LOCATION

London, Great Britain

#### ARCHITECT

Populous

#### CONSTRUCTION PERIOD

2016

#### STATUS

Completed

#### PROJECT CATEGORY

Sport and Leisure,  
Glued laminated timber

#### DETAILS

Glued laminated timber construction  
for the "Warner Stand" with  
beam lengths up to 25 m and  
cantilever beams up to 12.2 m.

Wood species: American White Oak  
Volume: 50 m<sup>3</sup> glued laminated timber

#### SCOPE OF SERVICES

Concept & Consulting, Research &  
Development, Planning, Project  
Management, Production, Component  
Delivery, Assembly

#### PRODUCT / SOLUTION

GLT BLOCK, GLT HARDWOOD

## LORD'S CRICKET GROUND - WARNER STAND

Throughout history, the world's premier cricket address has undergone several renovations, refurbishment, and modernization. This was also the case in 2016. In this renovation to the sports complex on St. John's Wood Road in London, the Warner Stand got an upgrade with the introduction of a new canopy of unique architectural design. Many different support systems and materials have been studied to design the roof structure. It soon became clear that only wood could do justice to the architectural idea and the sustainability concept aspired to by all those involved in the project. Extensive material testing and widespread research and development work enabled HESS TIMBER to use American White Oak.

HESS TIMBER

We assume responsibility for our environment. With every realised timber construction we contribute to the environmental protection as the wood used in construction stores the carbon that the tree has removed from the atmosphere. We are also committed to responsible sourcing of raw materials solely from sustainably managed forests. We guarantee this as a MEMBER of HASSLACHER group.
